

Optimization of the Terminal Departure Area

The City Airport of Bremen has combined two separate departure areas of its main Terminal into one with a centralized security checkpoint. On the basis of traffic forecasts for the year 2025 TH Airport Consulting has developed an optimized layout concept which has been realized in 2016.

Services

- Determination of flight schedules and capacity requirements for the year 2025
- Development and evaluation of layout options
- Planning of a central security checkpoint with optimized processes
- Functional design of the selected concept
- Preliminary cost estimate and schedule
- Detailed requirements specification
- Tendering and critical review of a technical feasibility study and the preliminary design

Period of Services:
2010 - 2015
