

Expansion of the Security Checkpoint

The security checkpoint at Karlsruhe / Baden-Baden Airport needed to be expanded to five security lanes within a given (limited) space. Optimized layouts for a higher throughput and better space utilization were developed together with the airport management and the responsible authorities.

Services:

- Assessment of existing security processes
- Development of layout options for the available space
- Determination of optimized processes for better efficiency
- Provision for body scanners in the future
- Evaluation of options and recommendation of a phasing concept
- Detailed drawing of the security checkpoint for implementation
- Process description for staff training

Period of Services:
2016
