

Immigration Checkpoints with Automated Border Control

Hamburg Airport was one of the first airports in Germany to be equipped with Automated Border Control. The German Federal Police installed the so called EasyPass System at the immigration checkpoint in Terminal 2 early in 2014 which will be followed by Terminal 1 by end of the year. TH Airport Consulting provided the process planning and the functional design to incorporate the technology into the existing checkpoints.

Services

- Process planning and conceptual design of various options
- Detailed functional design of the preferred options
- Requirements specification for further design and implementation
- Coordination with the relevant process owners

Period of Services:
2012- 2018
