

Terminal Master Planning

Hamburg International Airport has started a Master Planning process for its Terminal Buildings involving all departments of the Airport. Based on a new traffic forecast for the year 2035 and the previously determined concepts for the Airside consolidated layouts have been developed and suggested to the board. Since the initial project in 2015 we have been continuously involved in the update of the Terminal Master Plan.

Services

- Determination of capacity requirements for major parts of the terminal through simulation
- Development and evaluation of basic concepts for the terminal development including a central market place, pier expansions and terminal reconfigurations
- Analysis and optimization of the passenger flows for all options
- Layout options for check-in areas, checkpoints and other functions
- Review of the consolidated plans and reports

Period of Services:
2015 – 2020
